

Write a program to check whether the given element is present or not in the array of elements using linear search.

Input format:

- The first line of input contains the array of integers which are separated by space
- The last line of input contains the key element to be searched

Output format:

- If the element is found, print the index. If the element found multiple times, print the starting index
- If the element is not found, print **Not found**.

Sample Test Case:**Input:**

1 2 3 4 3 5 6

3

Output:

2

```
1 numbers = list(map(int,
2 input().split()))
3 key = int(input())
4 if key in numbers:
5     print(numbers.index(key))
6 else:
7     print("Not found")
```

Debugger

You are provided with the heights of 11 cricket players (in centimeters). Your task is to identify the tallest player, who will be selected as the captain of the team.

Input Format:

The first line of input will contain 11 integers, each representing the height of a player (in centimeters), each separated by a space.

Output Format

The output should be the height (in centimeters) of the tallest player.
